Upgrade to TIFF image output seamlessly

PSPDFKit Processor [2022.1](#) comes with a new format for outputting images: TIFF.

There are no specific migration steps you need to take to upgrade. However, the label for warning message logs has changed.

Warning Message Format

This version introduces a new label for warning message logs. Previously, the `[warn]` label was used. Starting with this new version, the `[warning]` label will be used.

PDF to TIFF

It's now possible to use TIFF as an image output format using the `/render` API. Please refer to the guide on [converting PDFs to images](#) to learn more about this feature.

Other Changes

For a complete list of changes in this release, check out the [Processor changelog](#).
