# Optimize Your PDF Processing | 2021.3 Migration Guide | Nutrient

PSPDFKit Processor [2021.3](#) comes with a new API for custom headers and footers that can be used when generating a PDF from an HTML template. There are no specific migration steps you need to take to upgrade.

## Headers and Footers

It's now possible to define custom headers and footers in your HTML templates used for PDF generation. These elements will be repeated across all generated pages. When defining a header or footer, you can use any HTML or CSS to add images, use custom fonts, set a background, etc. Additionally, you can also easily display page numbers or page counts.

Read our [headers and footers](#) guide to learn more about the feature!

## Other Changes

For a complete list of changes in this release, check out the [Processor changelog](#).
