Effortless key-value pair extraction for your data

PSPDFKit Processor has been deprecated and replaced by [Document Engine](#). To migrate to Document Engine and unlock advanced document processing capabilities, refer to our migration guide. Learn more about these enhancements on our [blog](#).

Nutrient's key-value pair (KVP) extraction engine automatically detects the data type of values. For example, the engine recognizes the value `infe@bruuuk.com` as an email and the value `+100 847 738 227` as a phone number.

The following data types are supported:

- ✧ Business Identifier Code (BIC)
- ✧ Credit card number
- ✧ Currency
- ✧ Date and time
- ✧ Email address
- ✧ International Bank Account Number (IBAN)
- ✧ Number
- ✧ Percentage
- ✧ Phone number

ASK AI

- ✧ Postal address
- ✧ Post code
- ✧ Social Security number (SSN)
- ✧ String
- ✧ Symbol
- ✧ Time period
- ✧ Unique Identifier (UID)
- ✧ URL
- ✧ VAT ID
- ✧ Vehicle identification number (VID)

When the engine doesn't recognize the data type of a value, it categorizes the value as a string.
