

PSPDFKit Server dashboard overview

PSPDFKit Server has been deprecated and replaced by [Document Engine](#). To migrate to Document Engine and unlock advanced document processing capabilities, refer to our [migration guide](#). Learn more about these enhancements on our [blog](#).

PSPDFKit Server comes with an optional built-in dashboard that makes it easier to both see what's going on in your production installation and improve your developer experience.

It's available at `/dashboard`. If you're testing PSPDFKit Server locally, you can follow the [Setting Up PSPDFKit Server](#) directions and access the dashboard at <http://localhost:5000/dashboard>. You can configure the required HTTP credentials in `docker-compose.yml`.

ASK AI

Use cases

The dashboard enables you to quickly:

- ✧ Inspect the runtime environment
- ✧ Create new documents (useful while integrating PSPDFKit for Web into your application)
- ✧ Access a link to our current documentation and guides
- ✧ Validate your generated JWTs

For interacting with the server programmatically, you can use the [backend API](#).

Authentication

The dashboard is secured using HTTP authentication. You can modify the username and password via the environment variables configured in your `docker-compose.yml` file:

✧ `DASHBOARD_USERNAME`

✧ `DASHBOARD_PASSWORD`

Disabling the dashboard

To disable the dashboard, leave the `DASHBOARD_USERNAME` and `DASHBOARD_PASSWORD` environment variables blank, or don't set them.
