# Accessing password-protected PDFs made easy

PSPDFKit Server has been deprecated and replaced by [Document Engine](#). To migrate to Document Engine and unlock advanced document processing capabilities, refer to our [migration guide](#). Learn more about these enhancements on our [blog](#).

With the release of 2018.3, PSPDFKit Server added support for password-protected PDFs.

LAUNCH DEMO

## Upstream API access

To access password-protected documents via the upstream API, add the `pspdfkit-pdf-password` header to your API calls.

Please refer to our guide on [API endpoints for working with documents](#) for more detailed instructions on how to access password-protected PDFs documents.

## Client access

Clients can access password-protected PDFs by using a JSON Web Token (JWT) that includes a `password` claim, or by supplying the password when opening or loading a password-protected document.
