# Update on 2019.5 API migration for web

**This release removes support for API version 2017.6.**

This change affects the following endpoints:

- ✧ [Adding an annotation to a document](#)
- ✧ [Adding an annotation with an attachment to a document](#)
- ✧ [Updating an existing annotation](#)
- ✧ [Updating an existing annotation with an attachment](#)

If you're using any of the above endpoints and manually setting the `pspdfkit-api-version` header, please make sure you update your application code to follow the examples included in the documentation.

A more explicit API for [downloading the PDF file associated with a specific layer](#) has been added, thereby deprecating the approach that uses the [document specific endpoint](#) with a `:layer_name` query string parameter.

## Migrate PSPDFKit for Web

For more information, please take a look at the [PSPDFKit for Web 2019.5 migration guide](#).

For a full list of changes, check out the [changelog](#).
