# Upgrade PSPDFKit Server with version 2018.1

[PSPDFKit Server 2018.1](#) adds support for importing and exporting XFDF and Instant JSON files and improves validation of your configuration settings.

## Necessary steps when upgrading PSPDFKit Server

PSPDFKit Server no longer allows you to use the default `SECRET_KEY_BASE` value `secret-key-base`. If you were using the default value, please note that you'll have to change your configuration. Otherwise, PSPDFKit Server will abort the startup. Take a look at the [configuration overview](#) for more information about our configuration options.

## Notable changes

- ✧ PSPDFKit now supports importing and exporting of [XFDF](#) and [Instant JSON](#) files. Take a look at the Importing Exporting section to find out more about each format.
- ✧ When [uploading documents](#), you can include an additional `attachment` file, which in turn will be imported into the uploaded PDF.
- ✧ There are two new endpoints, `api/documents/:document_id/document.json` and `api/documents/:document_id/document.xfdf`, which will export an Instant JSON and XFDF file of the document, respectively.

## Migrate PSPDFKit for Web

ASK AI

For more information, please take a look at the [PSPDFKit for Web 2018.1 migration guide](#).
