Key changes in PSPDFKit Server 2023.2 migration

PSPDFKit Server 2023.2 introduces several notable changes. To determine if you need to take action, check your implementation and the information below.

Removing deprecated endpoints

The following previously deprecated endpoints have been removed in this version of PSPDFKit Server:

- ❖ `GET /api/document` has been removed. Use `GET /api/documents/:document_id/pdf` instead.
- ❖ `POST /api/document` has been removed. Use `POST /api/documents` instead.
- ❖ The `original` parameter in `GET /api/documents/:document_id/` has been removed. Use the `source` parameter instead.

To learn more about these endpoints, refer to our [documentation](#).

New directory for temporary files

Server now stores temporary files at `/srv/pspdfkit/assets/tmp` instead of the default `/tmp` directory. Any ephemeral (external) storage that was previously mounted on `/tmp` should be mounted at `/srv/pspdfkit/assets/tmp` as well.

Database migrations

ASK AI

There are no database migrations for this release.

Dropping IE11 support for Server’s dashboard

You can no longer run Server’s dashboard on IE11 after upgrading to this version.

Migrating PSPDFKit for Web

For more information on how to upgrade the Web SDK, see the PSPDFKit for Web 2023.2 migration guide.
