Update your license with PSPDFKit Server

PSPDFKit Server has been deprecated and replaced by [Document Engine](#). To migrate to Document Engine and unlock advanced document processing capabilities, refer to our [migration guide](#). Learn more about these enhancements on our [blog](#).

When your license is renewed or new features are added to it, any PSPDFKit Server installation using that license needs to be updated. There are two ways to do this:

- 1 Update the license through the [dashboard](#).
- 2 Restart any of your Server nodes.

In general, the first option is preferable, as it doesn't require any downtime. However, you must have the Server dashboard enabled.

To update the license via the dashboard, open the dashboard in the browser, and go to License in the sidebar. Click the Check for License Update button:
