Enhance PDF capabilities with the 2021.5 migration

This release introduces new features, performance improvements, and bug fixes.

Support for reading embedded files

We added a new set of APIs for reading files embedded in PDF documents. You can now retrieve information about embedded files in a document or a layer via `GET`

`/api/documents/:document_id/embedded_files` and `GET`

`/api/documents/:document_id/layers/:layer_name/embedded-files`. The binary content of embedded files themselves can then be retrieved via an existing attachments endpoint.

Signature check time configuration

By default, the digital signature certificates are validated against the current time. This means that valid signatures with expired certificates validate as expired. This release adds the

`DIGITAL_SIGNATURE_CERTIFICATE_CHECK_TIME` configuration option. Set it to `signing_time` if you wish to validate certificates against the signing time instead of the default.

Learn more about this configuration in our guides.
