Save PDFs to a remote server in UWP

Saving a local document to a server is a straightforward process with Nutrient UWP SDK. This is achievable by programmatically exporting the document and then sending it to its remote destination.

The example below uses Microsoft's `HttpClient` for demonstration purposes, though the general idea should be easy to adapt to whatever solution you choose to use:

```
1 var storageFile = PDFView.Document?.DocumentSource.GetFile()  
2  
3 using (var fileStream = await storageFile.OpenReadAsync())  
4 {  
5     using (var client = new HttpClient())  
6     {  
7         var contentStream = new HttpStreamContent(fileStream);  
8         var response = await client.PostAsync(address, contentStream);  
9     }  
10 }
```

For a better understanding of the use of `StorageFile` and `DocumentSource` in our SDK, you can read our [save a document to a StorageFile guide](#).
