Extract pages from PDFs in UWP

The following example shows how to use `Editor.Job` to produce a new document that keeps only pages 0 and 2 from a source document:

```
1 // Make a job with a source document as input.
2 var editorJob = new PSPDFKit.Document.Editor.Job(sourceDocument);
3
4 // Keep the first and third pages.
5 await editorJob.KeepPagesAsync(new int[] { 0, 2 });
6
7 // Generate a new document.
8 var newDocumentStorageFile = await PSPDFKit.Document.Editor.Editor.NewStorageFile();
9
10 // Load this document into a `PdfView`.
11 PdfView.PdfFileSource = newDocumentStorageFile;
```
