Remove PDF pages in UWP

The following example demonstrates how to use `Editor.Job` to remove a set of pages:

```
1 // Make a job with a source document as its input.
2 var editorJob = new PSPDFKit.Document.Editor.Job(sourceDocument);
3
4 // Remove the first and third pages.
5 await editorJob.RemovePagesAsync(new int[] { 0, 2 });
6
7 // Generate a new document.
8 var newDocumentStorageFile = await PSPDFKit.Document.Editor.Editor.NewStorageF.
```
