Nutrient UWP SDK 3.0.3 migration guide

This article provides a set of guidelines for migrating from version 3.0.2 to version 3.0.3 of Nutrient UWP SDK.

Property name changes

To ensure consistency across annotations and support the functionality of reading the note text through the API, we introduced a new property named `OptionalNote`. This property replaces the existing `Note` property, which was previously used by the `Stamp` annotation for the same purpose.

Why the change?

The decision to rename the `Note` property to `OptionalNote` was made to prevent conflicts with class names, particularly with the `Note` annotation.

What do I need to do?

3.0.2	3.0.3
<code>Stamp.Note</code>	<code>Stamp.OptionalNote</code>

Was this helpful?

✓ YES

✗ NO
