# Showing or hiding annotations in our UWP viewer

It's possible to show or hide annotations in the `PdfView`. The methods of achieving this are similar to setting the visibility of the toolbar.

If a `PdfView` is being used, then the options can be set in `xaml`:

```
<ui:PdfView ShowAnnotations="false" Name="PDFView"/>
```

Alternatively, you can set this at runtime:

```
pdfView.ShowAnnotations = false;
```

If you aren't using a `PdfView`, then it's still possible to set it via the controller:

```
await controller.SetShowAnnotationsAsync(false);
```
