# Move or rearrange PDF pages in UWP

The following example shows how to use `Editor.Job` to move pages to a new location in a document. To do this, specify the pages you wish to move and the index they should be moved to:

```
1 // Make a job with a source document as its input.
2 var editorJob = new PSPDFKit.Document.Editor.Job(sourceDocument);
3
4 // Move the first two pages to page index 2.
5 await editorJob.MovePagesAsync(new int[] { 0, 1 }, 2);
6
7 // Generate a new document.
8 var newDocumentStorageFile = await PSPDFKit.Document.Editor.Editor.NewStorageF
```
