# Frontend integration of PDF redaction in Java

COPY PAGE

It's also possible to design how the redactions would look on one of our powerful UI frameworks ([iOS/Android](#)), export this redaction information, and apply the redactions with Nutrient. To create the redaction information, [Instant Document JSON \(iOS/Android\)](#) is used. It can then be imported into the document on the server, and the redactions can be applied:

```
File redactionJsonFile = new File("Assets/redaction.json");
document.importDocumentJson(new FileDataProvider(redactionJsonFile));
```
