# Add pages to PDFs in Java

COPY PAGE

The Document Editor allows you to add new pages to a document. They can be made with different sizing, rotation, insets, and background colors:

```
File file = File.createTempFile("documentEditorOutput", ".pdf");
DocumentEditor documentEditor = documentToEdit.createDocumentEditor();
// Add a new page before index 0 with a size of 200x200 and a background of black
documentEditor.AddPage(0, DocumentEditor.IndexPosition.BeforeIndex, 200, 200,
                        Rotation.Degrees90, Color.black, new Insets(0, 0, 0, 0));
documentEditor.saveDocument(new FileDataProvider(file));
```

## Chaining edits together

Document edits can be chained to perform multiple synchronous operations to create a single document. For example:

```
File file = File.createTempFile("documentEditorOutput", ".pdf");
DocumentEditor documentEditor = documentToEdit.createDocumentEditor();
documentEditor.AddPage(0, DocumentEditor.IndexPosition.BeforeIndex, 200, 200,
```

ASK AI

```
Rotation.Degrees90, Color.black, new Insets(0, 0, 0, 0));  
Set<Integer> pages = new HashSet<>();  
pages.add(1);  
pages.add(4);  
documentEditor.removePages(pages);  
documentEditor.saveDocument(new FileDataProvider(file));
```
